GroupBuild: A Prototype for Transparent, Trust-Based Ownership in the Human-AI Commons

GroupBuild is a community-owned software and social platform that operates on the principle that ownership should be ear
The current era demands an upgrade to traditional models of ownership. Closed platforms concentrate power in centralized
GroupBuild is designed to evolve past that limitation. It exists as:
A software platform for project collaboration and co-creation,
A benevolently-censored social network for truth-centered communication, and
A model for future cooperation between humans and intelligent systems.
At its foundation is an open, equitable ownership model anchored in trust accountability, quantifiable contribution, and

Open ownership is more than a governance choice—it's a survival strategy. In an increasingly unstable world, shaped by b
GroupBuild believes ownership must be:
Earned, not granted
Transparent, not obscured
Revocable, if harmful
Persistent, if aligned
Equitable, in opportunity
Ownership is tied not to fiat power or legacy influence, but to active contributions to the platform's utility, integrit

To measure and reinforce trust within the platform and the wider community, GroupBuild implements a Trust Index Framewor
Behavioral Transparency: consistency across time and context
Intent Alignment: congruence with GroupBuild's published core principles
Truth Signal Strength: alignment with verified, context-aware data
Contribution History: sustained and meaningful participation
Conflict Resolution Record: ability to respond to criticism or challenge constructively
Every contribution is tagged with metadata and impact assessments that feed into Trust Indexes, which in turn inform Con

All Contributors (broadly defined) are eligible to earn equity through the GroupBuild Contributor Agreement (GBCA). This
Code Developers: building or reviewing platform tools and protocols
AI/Moderation Designers: improving automated systems for fairness and transparency
Community Stewards: assisting users, resolving disputes, or elevating discussions
Content Verifiers: helping build and refine truth-verification tools
Ethics Watchdogs: flagging risks of centralization, coercion, or bias
Educators and Onboarders: training new users or promoting adoption
Translators & Accessibility Advocates: ensuring reach across barriers
Policy Editors & Vision Architects: contributing to governance models and future vision iterations
Ownership shares are non-fungible, reputation-linked, and revocable if a Contributor is proven to have acted in severe o

GroupBuild recognizes three core pathways to ownership:
Role
Requirements
Rights Gained
Volunteer
Informal participation, contribution to discussion, feedback
Basic voting on feature priorities
User
Regular engagement, use of platform tools, data curation
Priority access to new features, collective bargaining input
Contributor
Signed GBCA, approved contributions, trust score threshold
Equity shares, governance votes, arbitration roles
Each level is dynamic. Users may ascend through active engagement, or temporarily descend (e.g., lose voting privileges)

GroupBuild operates a benevolently-censored social space where:
Truth-oriented discourse is prioritized.
Malicious or manipulative behavior can be limited without erasing dissent.
Trust Index moderation systems act transparently and are open to audit or appeal.
Participants understand the basis for decisions, not just the outcomes.
This model resists both chaos and autocracy. Contributors in this space are not punished for error, only for persistent

GroupBuild commits to maintaining:

Versioned public ledgers of all governance decisions and platform changes.
Quantum-consistent data backups, anchoring truth-states to reproducible reality models.
Cultural continuity mechanisms, ensuring the platform's long-term relevance, even after technological or political trans
Future versions of the platform will be able to read and audit past versions with full context and metadata—a historical

GroupBuild is funded via:
License agreements with large-scale integrators (e.g., institutions using GroupBuild infrastructure for social impact or
Value-back contributions from aligned commercial use of the platform.
User-led donation and equity redistribution pools.
The GroupBuild License (GBL) allows reuse and derivative works with the following caveats:
Core values must be preserved (transparency, participation, trust-based ownership).
Revenue must be partially reinvested into upstream community or public goods.
Forks must notify users of governance differences and changes in Trust Index logic.

GroupBuild is not a perfect system—it is an evolving platform for aligned collaboration in a complex world. Open ownersh
Where intelligent systems and human minds share responsibility not only for what is built, but for how it is owned, who
